What is Novus EnRich?

The Novus ^REnRich solution has been specifically designed for schools. It uses special HP Thin Client technology to deliver a cost-effective, secure platform on which a protected and integrated VLE can be built. ✓

Why is the new solution better than traditional PCs?

1. Greener: Thin Clients save more than space. They use approximately 10% of the electricity of a PC, reducing heat output and your carbon footprint. ✓
2. More flexible: They're easily integrated into your existing environment, and used in so many different ways (wirelessly, or via broadband from home). ✓
3. More manageable: You'll spend less time and money! Implementation, management and patching are carried out centrally. ✓
4. More sustainable: Typically, a Thin Client lasts twice as long as a PC! You'll also be able to use your existing PCs as Thin Clients, enhancing their life span. ✓

Why is it so good for pupils?

I'll have access to all school resources from anywhere, so I'll have no more excuses not to do my homework. ✓ *About time*

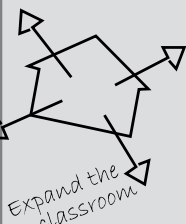

Where is Novus EnRich best implemented?

It works everywhere, actually! Beyond Thin Client devices, it can also include PCs, networking, storage, security and printing solutions. ✓
